

High-quality doors and counter shutters for eco buildings

Today the market of interior doors, front doors and garage gates is filled with different types of products. It is possible to find both qualitative and rather low quality doors. So how to choose a high-quality and, what is even more important, Eco-friendly doors that would meet your needs and expectations?

Every home owner is committed to make his house consume a minimum of energy to maintain a comfortable indoor temperature. Many people start to perform specific actions in order to make their homes warm and cozy. And, of course, one of the most efficient and easy way to accomplish this task is to replace the old doors and windows, with new Eco-friendly, energy saving [high speed](#) fabric doors. Few people know that about 15% of the heat leaves the room through the front doors. Of course, a larger amount of heat is lost through the windows. That is why, when it comes to house warming, most people first of all pay their attention to the replacement of windows rather than doors. By replacing windows, people hope to reduce the heat loss to a minimum. But the window is not the one thing that need to be changed. The doors also play a crucial role in heat saving. Today, those people who are concerned about the problems of ecology and conservation of natural resources, put forward a very strong requirements for the front doors and garage doors quality and materials.

Nowadays, every person knows that [closed](#) counter shutters may save a lot of energy and prevent heat loss, especially during cold year seasons. Not only high-quality counter shutters will make your house or apartment warm in winter, but also they will keep cool temperature inside the premises in the summer and

protect your home from direct sunlight penetration.

Modern ecologically friendly doors and windows are designed to protect house

from noise, dust, drafts, prevent heat loss and, of course, to protect the property from burglary. Advanced technologies that are used in the manufacturing of such products allow to reduce the noise level significantly, which definitely has a positive effect on human health. What is more, such technology reduce heating costs by 25-30%. The Eco-friendly doors are manufactured from solid wood or from wood veneer. So, if "the green house" is not just a popular word for you, choose the doors and garage gates made of solid wood. Wood is quite a capricious material. It is able to absorb moisture, breathe, change the shape, color, crack and even rot. The origin of a wood, is the main point when choosing doors of this material.

The replacement of old doors with new Eco-friendly one is a great step that will make your home warm and comfortable. If you are about to make your home "greener", you should contact professionals that will choose and install the right energy saving doors with the help of specialized equipment, such as [tilt](#) dock levelers and their skills and knowledge. Remember, proper installation is very important in case you want your doors to serve you effectively, so do not try to do it on your own.
